

It is easier to move from failure to success in from excuses to success.

John C. Maxwell

The Careers Centre, in the Monash Building, is a resource centre for our students with current institutional handbooks and brochures at their disposal. Students are invited to visit, browse and question. An open-door policy exists to ensure students make informed decisions about future pathways.

Initial Year 12 interviews have begun to assist students with the momentous decisions facing them this year. Please make sure you attend Homeroom so that you can sign up. Parents/guardians are welcome to take advantage of the services provided. **Appointments** can be made to discuss the future pathways of their children.

Work

Job Spotlight

How to become a Zookeeper

Zookeepers care for animals living in captivity and on display to the public for the purposes of conservation and education. They carry out the jobs associated with the animals' daily care, including feeding, training, and cleaning. They're also responsible for keeping animals stimulated, supporting breeding programs, providing information to visitors, and assisting with any necessary vet work.

If you'd like to be a zookeeper, just loving animals isn't really enough – you'll need to be dedicated to caring for their every need and prepared to be very hands-on. If you're practical, adaptable, and able to maintain high standards of safety and care, then a career as a zookeeper could be worth exploring.

What skills do I need as a zookeeper?

- Caring & dedicated
- Great team player
- Excellent communicator
- Hard worker
- Physically fit
- Adaptable & resilient
- Excellent problem-solver
- Level-headed & decisive

What tasks can I expect to do?

- Routinely check on animals & observe them
- Prepare diets to strict guidelines
- Clean & disinfect indoor & outdoor enclosures
- Ensure water & other essentials are supplied
- Provide training, enrichment & exercise
- Chat to zoo visitors & perform public talks
- Ensure animals are secure at all times
- Respond to & help with emergency situations

What industries do zookeepers typically work in?

- Arts and Recreation Services
- Agriculture, Forestry and Fishing
- Other Services

What Career Cluster do zookeepers belong to?

Because their job involves lots of hands-on work and they need to be adaptable and reliable, most Zookeepers fit in the [Maker Cluster](#).

What kind of lifestyle can I expect?

As a zookeeper you'll need to work outside typical business hours, including on weekends and holidays, as the animals need to be cared for every single day. It can be physically demanding work, which must be done on site and in all weather conditions.

Most zookeepers earn an average salary throughout their career.

Zookeepers are limited as to where they can work – you need to live near to a zoo and be prepared to compete for a job, as they are very highly sought after. Because of the hands-on nature of the job, remote work and working from home isn't possible.

How to become a zookeeper

To become a zookeeper, you need to complete a relevant vocational training program – this can usually be done as part of an apprenticeship. Your training will involve learning about animal behaviour, nutrition, health, and welfare, as well as practical skills such as handling, grooming, and training.

Ongoing professional development and education throughout your career is also necessary to stay up-to-date with the latest techniques and best practices in animal care and training.

If you're in high school now and are thinking of a career as a zookeeper in the future, here are some steps you could take:

- Find work experience or volunteer at a vet clinic, wildlife park, animal welfare organisation, wildlife rescue agency, pet shop, or animal grooming business.
- Practise your public speaking – most zookeepers are expected to interact with visitors and do presentations and performances.
- Get fit! You'll need to be physically capable of doing the work and it is very hands-on.

Skills for Work

[Critical thinking – Why is it vital in the workplace?](#)

Lots of careers list critical thinking as a core skill that's required in order to be successful. But what exactly is it, and how will you use it in your future career? In this blog, you'll find out if you are a critical thinker, see examples of why you might need this skill in the workplace, and get tips on how to develop your critical thinking skills.

What does critical thinking actually mean?

Essentially, it means you can:

- learn to recognise or develop an argument,
- use evidence to support your argument,
- draw reasoned conclusions, and
- put your knowledge to use by using that information to solve problems.

Why critical thinking in the workplace is important

Employers want job candidates who can evaluate a situation using logical thought and offer the best solution. And if you have strong critical thinking skills, it's likely you can do these things.

Critical thinkers in the workplace are more likely to understand the meaning behind their role, which increases the chances of them engaging with the work. Plus, critical thinkers can reduce wastage and increase productivity by analysing processes and identifying areas for improvement, be trusted to make decisions independently, and won't need constant hand-holding.

Examples of jobs that require critical thinking

Wondering which careers you might need to flex your critical thinking skills in? There might be more than you think...

- **Nurses** working in emergency triage need to assess the cases waiting to be seen and decide who needs to be treated first.
- **Plumbers** need to evaluate what action needs to be taken, then decide on the best materials to do the job.
- **Lawyers** review evidence, refer to past rulings and laws, and come up with strategies to win a case or get the best outcome for their clients.
- When dealing with large quantities of goods and complex supply chains as a **logistics manager**, you'll need strong critical thinking skills.
- As an **accountant**, clients will appreciate your critical thinking skills when you help them save and use their money productively.
- **Managers** need review customer feedback and use it to make changes or improve on their services and/or products.
- **Software developers** need critical thinking to design complex but efficient code, making programs easier for people to use.
- Thinking of becoming a **doctor**? You'll need to use critical thinking skills to identify complex symptoms and ensure you're providing the best possible care.
- Safety is incredibly important, so being able to think critically and identify any problems is crucial for **occupational health and safety officers**.

How to develop your critical thinking skills

Whenever you find yourself in a situation where you need to use your critical thinking skills, here are some steps you can take to practise:

Pinpoint the issue

What exactly is the problem that needs solving or the question that needs answering? By getting to the root of the problem, you can develop better and more thorough solutions.

Collect information

Next, do some research and collect data. Be sure to include sources that challenge your own opinions, and ensure you only use information from reliable sources.

Evaluate

Think about whether you've approached this exercise with an open mind, a willingness to learn, and done enough research. Then, reject any dodgy information, then make sure everything that's left is actually relevant to the original issue.

Conclude and assess

Based on your work, create a couple of conclusions. Then assess each one for weaknesses and decide which one is the most sound.

Share your ideas

Communicating your findings to other people is the last – but most important – part of critical thinking. If you can't effectively share your thinking or solutions, then you may have wasted your time.

How else can you become a better critical thinker?

One of the best ways to build your critical thinking skills is to actually work on your other core skills. In fact, you'll probably hone your critical thinking skills without even knowing! Here are some critical thinking-related skills that can boost your employability even more:

- **Observation** – taking notice of what's going on around you could help you to see opportunities and problems, as well as come up with solutions.
- **Analysis** – this could help you to gather the right information, understand it, and draw useful information from it.
- **Communication** – building active listening, teamwork, and presentations skills will ensure that you can share information in the best way.
- **Problem-solving** – learn to identify problems, find solutions and then, importantly, assess whether the solution is working or not
- **Objectivity** – this skill will allow you to really 'see' the information in front of you, rather than working from assumptions or your own personal bias.

Stepping outside your comfort zone, being inclusive, and saying yes to a variety of opportunities are all other great ways to help you build your critical thinking skills.

Find out more

You can read more about the skills you need for work on our website [here](#).

Jobs & Careers

[The changing world of work](#)

The world of work is always changing. Not that long ago, you could have expected to walk away from school into a job in a factory or office and stay there for 45 years. These days, "job-hopping" is much more common – it's predicted that Gen Z workers can expect have [up to 16 jobs across their lifetime](#). And many jobs that existed even just 30 or 40 years ago are no longer necessary thanks to new technology.

In fact, technology is now moving at such a pace that we can expect work to look different again in just 5 years – but we can predict (to some extent) what will happen. So why is it important to think about how the world of work is changing, and how might it affect your future career path?

How is the world of work changing?

Since the 1970s, changes in government policy and organisational structures have kept the unemployment rate in Australia at around 7% on average. This means employers have more power over employees who may struggle to find work if they lose their jobs, and is part of the reason why people are willing to accept less secure work with fewer benefits, like gig work.

Advances in technology also mean that lots of the menial, repetitive tasks which used to be done by people are now handled by ever-more intelligent computers. Take the touch-screen ordering system at many fast food restaurants, or the self-serve checkouts at the supermarket – not so long ago these places provided many low-skill, entry-level jobs which are now being done by technology.

It's not just low-skill jobs that are being affected. Law firms no longer need teams of junior lawyers and legal secretaries to comb hardcopy legal documents; they have automated databases which can be searched by keyword. Librarians are being replaced by online search systems, and pharmacy assistants are being replaced by robotic dispensing machines.

You'll need your human skills

So if robots are taking over so many jobs, what's left for us? Well, there are lots of things that robots simply can't replicate (or at least not to a satisfactory standard) – these are jobs that require our human skills.

Human skills are skills that cannot be replaced by technology. Creativity, intuition, and innovation are human-specific, as are caring skills that help people feel comfortable. Mediators, teachers, nurses, and salespeople are just some examples of human-centric jobs that will always be needed in our workforce.

If you're interested in learning a bit more about the future of work and the skills you'll need, check out this [video](#).

It's not all doom and gloom

Sure, reading about this stuff can get a bit depressing, but it's actually not a bad thing. As robots take over some of our duller jobs, that frees us up to work in more satisfying roles. People in jobs that have been taken over by technology, such as factory line workers, are being supported to up-skill and find new work in other areas that give them more variety and challenges.

The other thing to remember is that most of us pivot at one point or another anyway. For example, apprentices become employees who might go on to start their own business, or manage a team of tradespeople – which requires vastly different skills to those they learnt as an apprentice. And people change jobs all the time; sometimes because we have to, but often because we get bored and want to find a new challenge.

If you're interested in learning more about how often we change jobs, check out the [FYA New Work Order Series](#) for more details.

You don't want to be a robot

It's easy for technology to replace the jobs with lots of repetitive, predictable tasks, which is why factories thankfully no longer employ armies of small children and now look like something from a science-fiction movie instead. Working 'like a machine' isn't a good thing – it's boring, tiring, and never gets any better, so if there's a robot that can do your job, it means you are free to move on to something else.

The loss of some jobs is being replaced by increased demand for human jobs at all skill levels – the huge outcry for more health and aged care workers is just one example. You can't automate caring for other people or mediating conflict; these things require humanity, and jobs that require these skills are often highly rewarding too.

How does this apply to my future?

Not all of us will be negatively affected by the changes to the world of work. In fact, if you're aware of what's happening, you could use these changes to design a future that works for you – one where you don't work like a robot doing the same thing every day.

The place to start is with the possible futures you can identify for yourself. Take each one, then analyse it through the lens of "will robots take my job?" You don't need to guess – there [is literally a website when you can ask](#) this.

The safer your chosen job is, the less likely you'll find yourself needing to pivot into something else down the track. If your chosen job is at high risk of automation, ask yourself what appeals to you about the job, and see if you can find other roles in similar areas that are less likely to be impacted.

Learn more

If you're keen to learn more about the future world of work, you can read heaps of other blogs on our website [here](#).

Grow

Goal Setting

[Setting achievable goals](#)

When it comes to setting goals, the sky's the limit, right? But there's a difference between setting goals that sound good, and ones that are actually achievable.

If we set achievable goals, we're much more likely to follow through and complete them. That's not to say you can't aim high – but you need to remember to be realistic at the same time. So what goes into setting achievable goals? Let's take a look.

Are you willing to work for it?

This is probably the most important question to ask yourself. More often than not, achieving our goals requires us to put in a bit more effort than usual. If you're not willing to do that, chances are you won't reach your goal.

For example, if your goal is to get As for all your subjects, but you don't want to do any more study than you do now, chances are your goal is not achievable.

Is it compatible?

For your goal to be achievable, it also needs to be compatible with other parts of your life, and any other goals you might have set. Think about whether you live in the right place, if you have enough money, or whether you have any other important commitments that might hinder your progress.

Is it realistic?

Of course, you need to make sure your goals are realistic. If you're already 16 and have never played sport in your life, making it to the Olympics by the time you're 20 is probably not realistic. While it's important to dream big, you also want your goals to be realistic, or else you might end up feeling let down if you can't achieve them.

Setting yourself up for success

If you've gone through the above questions and haven't run into any problems, chances are you've set an achievable goal.

Remember, just because a goal doesn't fit in with your life right now doesn't mean you can't go back and revisit it in the future.

Or maybe you need to consider working on some smaller goals to make your way up to a big one – if you want to run a marathon in 2 months' time but are very unfit, make your goal to run just 1k, then 5k, and so on, until you feel ready to achieve your big goal.
